TeleMate.Net Software Introduces NetAuditor Event Manager with Innovative SIEM Implementation

NetAuditor's automatic user association combined with GeoIP integration enhances enterprise border security

Norcross, GA – August 13, 2012 – TeleMate.Net Software, a global provider of voice network monitoring and Internet security solutions, today announced general availability of NetAuditor Version 3.1. NetAuditor expands best-practice network security event management (SEM) strategies beyond basic end-point protection by accelerating the detection and automated response that leading firewall manufacturers omit in their border security offerings. NetAuditor includes automatic end-user identity association, geographic location identification by region; country; and service provider, Internet content categorization, real-time monitoring, and network event triggers.

"NetAuditor has evolved from a traditional log management reporting system to an event management system.", said John O'Reilly, COO and President of TeleMate.Net Software. "Manufacturers including Cisco, Microsoft, CheckPoint, Symantec, and Juniper provide state of the art technology to build the best security fence but they do not provide the surveillance camera. NetAuditor Event Manager provides the next generation view network administrators are demanding. The need to capture and correlate network traffic from all sources regardless of the activity originating on the private or public network interfaces is critical. Business drivers that escalate this significance include network security, compliance, identity based access control, and social topic like BYOD (bring your own device) initiatives. NetAuditor's SEMS feature set addresses these needs plus adds the benefit of zero administration".

For an online demonstration of TeleMate's NetAuditor Event Manager, request a demo at www.telemate.net or contact us at info@telemate.net for a free evaluation copy.

About TeleMate.Net Software

TeleMate.Net® Software is a global leader in voice and data network monitoring and security solutions, which provides cost effective, reliable, and feature-rich solutions to service providers, corporations, and federal, state, and local agencies, creating unprecedented visibility within their complex IT networks, and allowing customers to spend less time collecting and monitoring data and more proactive time managing their overall business. Since 1986, TeleMate.Net Software has evolved its core reporting technology, incorporating the latest advances in database, reporting, user-interface, and categorization technologies, to become the dominate force in addressing telecommunications administrators core requirements.
