

NetAuditor, a web usage reporting application, provides comprehensive reports for large volumes of network device logs, while offering ease-of-use and minimal cost of ownership. NetAuditor greatly reduces the overall cost of ownership as compared to competitive solutions. In head-to-head comparisons NetAuditor demonstrated a 97% reduction in data storage requirements.

Visibility and control of your network

HTTP, FTP, IM, P2P, SIP phones, etc...for many IT professionals, terms like these spell "headache". Not only are IT managers responsible for providing reliable Internet connectivity for these protocols and technologies, but many require that organizations trail and record their usage. Increasingly, inappropriate or unmonitored Internet usage can expose organizations to a number of costly risks, including network security breaches, reduced network service levels, diminished employee productivity, adverse publicity and even legal liability.

Designed to help organizations comply with regulatory mandates and minimize Internet usage risks, NetAuditor can be used with many leading firewall and proxy servers to provide alerts and documentation on suspicious or problematic network traffic. NetAuditor provides comprehensive summary and detail audit reports for web, FTP, peer-to-peer, instant messaging and other types of Internet traffic traveling through your network, enabling IT managers to regain control and visibility across the network.

Regulatory Compliance

Today government and industry regulations increasingly mandate the implementation and use of audits for Internet activity as part of a larger strategy to help protect sensitive information and individual rights. North American legislative examples include the Sarbanes-Oxley and Gramm-Leach-Bliley Acts, the Health Insurance Portability and Accountability Act (HIPAA), the Children's Internet Protection Act (CIPA), SEC Rule 17a-4, NASD Rules 3010 and 3110 and others. For organizations that must comply with these mandates, Internet auditing isn't a choice - it's the law.

NetAuditor simplifies compliance with these mandates, usability features as well as low cost of ownership means that regulatory compliance doesn't have to be a burden on your staff or your budget.

Legal Exposure

Abusive non-business related Internet usage can severely impact organizational productivity, but worse when employees use your network to access illegal or copy righted materials such as music, movies, pornography, hate content or gambling, they expose your organization to legal liabilities and potentially negative publicity.

Employee Productivity

NetAuditor provides fast, accurate summary and detail reports for web, P2P, IM and many other types of network traffic activity. Leveraging the patent-pending NetSpective Adaptive Filtering™ URL categorization system, NetAuditor profiles traffic in more than 60 content categories, including:

- Pornography
- Web E-mail
- Shopping
- News
- Games
- Gambling
- Instant messaging
- Travel
- Sports
- Peer-to-Peer (including Skype™)
- Racist material
- Personals/Dating
- Finance/Investing
- Entertainment

Monitor and Audit Network Security Events

NetAuditor protects your network by providing you with monitoring and forensic security event reporting for your CheckPoint NG or Cisco PIX firewall solution. A high performance design means you'll be able to quickly extract and analyze event data by a range of criteria and dig into the essential details needed for a fast, appropriate response. What's more, NetAuditor allows you to preserve the integrity of your original firewalls logs and ensure no data is lost.

Bandwidth Utilization and QoS

NetAuditor provides insightful information on traffic patterns, content classification, non-essential bandwidth usage and more, helping you provide the highest quality of service and ensure the most effective use of your budget and resources. By tracking who uses your network, how much, when and for what purpose, NetAuditor helps you make informed decisions about how to make the most of your existing network or plan for upgrades.

Optimization and Interoperability

NetAuditor's clean, Microsoft interface and tight Windows integration maximize usability and manageability. Equally important, NetAuditor is optimized to enable fast as well as complete reports on tens of gigabytes of log files on a desktop devices.

Compact Design

NetAuditor's compact design provides high usability and incurs a minimal hardware footprint, scaling easily from small applications to large enterprises.

NetAuditor offers your enterprise a strategic software tool to help you ensure regulator compliance, minimize legal exposure, maximize employee productivity, monitor and audit network security events and maximize performance while reducing total cost of ownership. Why not try it out today?

For a limited time- we're offering a free, no risk, no obligation trial. visit <http://www.telemate.net/products/netauditor/evaluation.php> to access.

NetAuditor®

Specifications

- Firewall manufacturers support by NetAuditor include:
 - Cisco PIX
 - Microsoft ISA
 - Juniper NetScreen
 - Symantec Enterprise Firewall
 - Checkpoint
 - Novell Board Manager
- NetAuditor supports both processing and reporting filters by:
 - Protocol
 - Category
 - IP Address
 - IP Address Range
 - UserID / User Group
- Web-based reporting
- Report Export formats
 - Compressed Dynamic HTML
 - PDF
 - Microsoft Excel
 - Delimited
- Minimum Hardware Platform:
 - Pentium III 800mhz or higher
 - 512MB RAM or higher
 - 10GB or more of available disk storage. Additional space may be available based on your reporting and datastorage requirements.
- Operating System:
 - Microsoft Windows XP (SP2 or later)
 - Windows 2000 Server (or later)
 - Windows 2003 Server (SP1)
- Licensed by the number tracked users AND firewall manufacturer log types
